Third Grade Math - Unit 1: Addition and Subtraction

Lesson 1: Introduction to Two-Digit Addition

Students will learn how to add two-digit numbers with and without carrying.

We use base ten blocks to represent tens and ones before writing the sum.

Example: 34 plus 25. First add the ones: 4 plus 5 is 9.

Then add the tens: 30 plus 20 is 50, so 34 plus 25 is 59.

Lesson 2: Adding with Regrouping

When the ones column totals ten or more, we regroup one ten.

Example: 47 plus 28. The ones give 7 plus 8 is 15, write 5 carry 1.

The tens give 4 plus 2 plus 1 is 7, so the sum is 75.

Lesson 3: Subtraction Basics

Subtraction finds the difference between two numbers.

Students practice with number lines and base ten blocks.

Example: 62 minus 35 equals 27 using the standard algorithm.

Lesson 4: Word Problems

Students read a story and decide whether to add or subtract.

They write the number sentence, solve it, and check the answer.

Practice includes coin counting and sharing scenarios.
